

CRUD-I

Hey everyone!

We start at 7:05 AM.

Agenda

→ Primary keys

→ Foreign keys

→ Composite keys

SQL

→ Intro

→ Create tables

→ Add foreign keys

→ select

→ where

→ conditions

AND, OR & NOT

→ IN

→ CRUD-2

↳ Next class.

Primary keys.

Students

name	email ✓	phone_no ✓	password
------	---------	------------	----------

CK \rightarrow ~~(email & ph-no)~~
(email) -
(phone-no) -

Mysql / any relational database,
keys play a very imp role
 \downarrow

Data is store in tables ordered by
their keys.

height & id.

Primary keys \rightarrow one of the candidate keys that
is given a special role of being the key by
which the data will be sorted on the disk.

Good practices

① Ideally the value of a PK should not change.

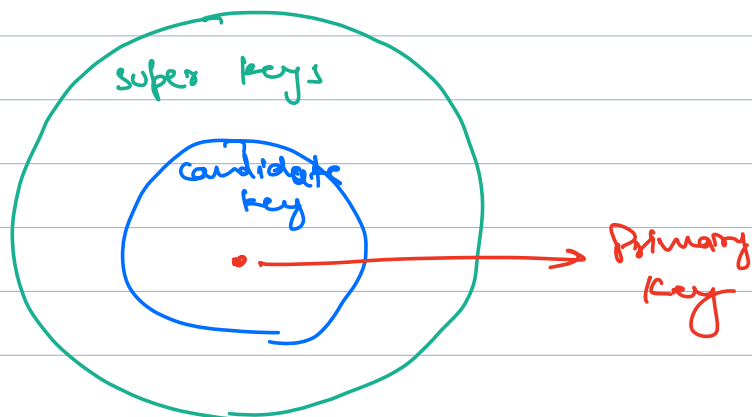

② There are some data types that are easier to compare.

$\frac{abcd}{acda} \} O(n)$

→ ideally a PK should be integer

id roll_no
Students
name class phone percent name

Introduction to SQL

S → { structured }
Q → { Query }
L → Language

⇒ allows you to write queries

structured

↓
organised

MySQL,

Relational DB allow you to store data
in an organised way

SQL

queries.

create, delete, update etc.;

Break till 8:20 AM

Foreign keys.

students

id	name	email	psp	is-active	batch-id
1	ujwal	abc@...	100	1	3
2	xyz	xyz@...	25	0	4
<u>3</u>	ijk	ijk@...	100	1	<u>7</u>

batch

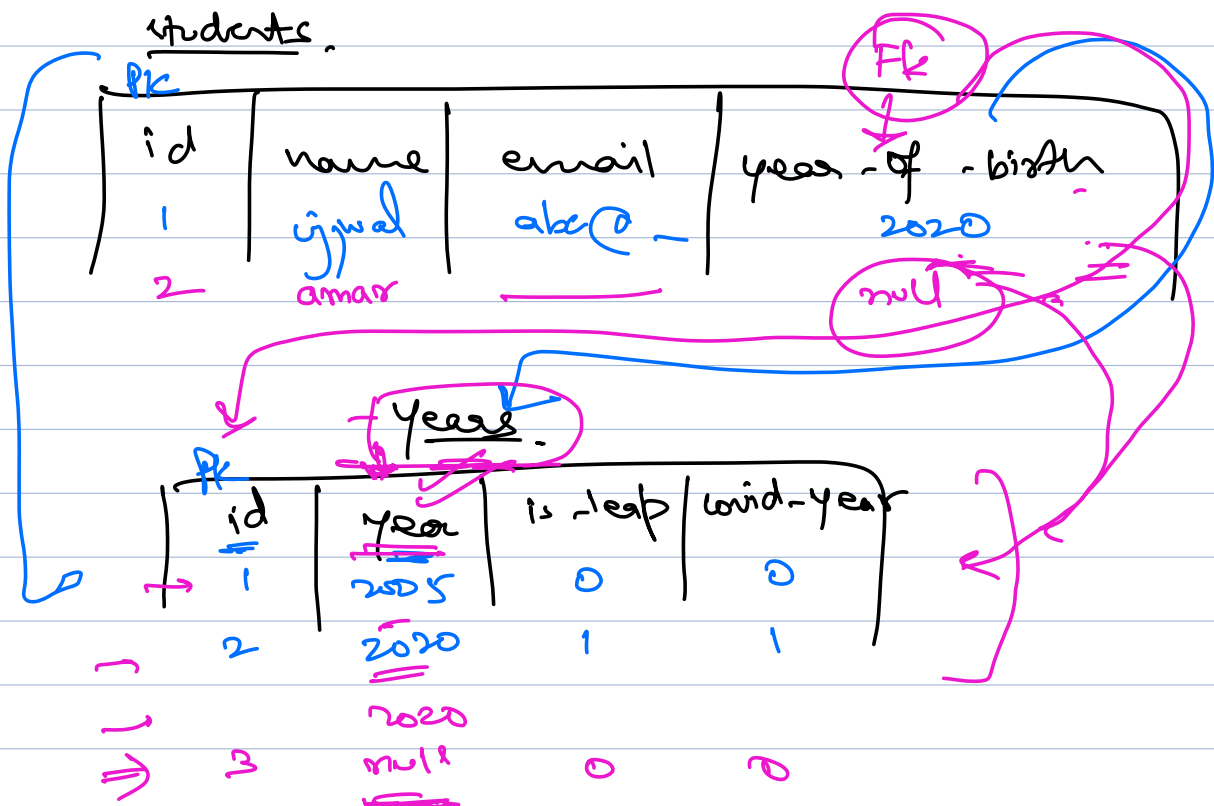

foreign key.

<u>PK</u> batch-id	batch-name
3.	Aug, 1
4.	April, 5

Foreign key → allow you to have constraint that allow a coln of one table to be linked to a coln of another table.

★ Foreign key does not have to be related to PK of the other table / referred table

→ The only thing FK allows is to map a coln or a set of coln from one table to a set of coln of the other table.

- ① coln of the referred table must be unique.
- ② both the sides can be nullable

students

id name batch_id ..

null

batch
id / name

Possible issues

- ① someone deletes a referred record
- ② someone updates a referred record.

Solns

- ① Throw an error
 - ② Delete all dependents
 - ③ set the value to null
- } constraints.

ON DELETE

- CASCADE
 - NO ACTION
 - SET NULL
 - SET DEFAULT
- (you will need to have a default value)

ON UPDATE

- CASCADE
- NO ACTION
- SET NULL
- SET DEFAULT
